Summary

Highly motivated Computer Science graduate from Jadara University with hands-on experience in designing and developing secure, scalable, and production-ready backend systems using C# and the .NET ecosystem (ASP.NET Core, Entity Framework Core). Proficient in building high-performance RESTful APIs and implementing modern software architecture patterns, including Clean Architecture, CQRS, Domain Events, and the Outbox Pattern. Experienced with real-time communication using SignalR, distributed caching with Redis, and secure authentication and authorization using JWT and Role-Based Access Control (RBAC). Skilled in working with SQL Server and PostgreSQL, containerizing applications with Docker, and applying unit testing, SOLID principles, and performance optimization techniques to deliver reliable and maintainable solutions. Passionate about solving real-world problems through innovative software and contributing effectively within collaborative development teams.

Education

Bachelor of Science in Computer Science | Jadara University | Graduated: Jun 2026

Project

LifeDrop – Real-Time Blood Donation Platform | Jun 2026

- **Technologies:** .NET 10, ASP.NET Core Web API, PostgreSQL, Entity Framework Core, MediatR (CQRS), SignalR, Redis, Firebase Cloud Messaging, QuestPDF, Docker.
- **System Architecture:** Designed and implemented a scalable, event-driven backend using Clean Architecture, CQRS, Domain Events, and the Outbox Pattern to ensure maintainability, reliability, and long-term scalability.
- **Backend Engineering:** Developed secure and high-performance RESTful APIs using ASP.NET Core to manage blood donation requests, donor eligibility, appointment workflows, and real-time communication between donors and healthcare providers.
- **Security & Reliability:** Implemented JWT authentication with refresh token rotation, Role-Based Access Control (RBAC), OTP verification, Idempotency, and Optimistic Concurrency to ensure secure and consistent system behavior.
- **Performance & Real-Time Features:** Integrated SignalR for real-time updates, Redis Hybrid Cache for improved response times, and Firebase Cloud Messaging (FCM) for push notifications to enhance user engagement and system performance.
- **DevOps & Monitoring:** Containerized the application using Docker and integrated structured logging, health checks, rate limiting, and response compression to improve observability, deployment consistency, and production readiness.

Mechanic Shop Management System | Jan 2026

- **Technologies:** .NET 9, ASP.NET Core Web API, Blazor WebAssembly, SQL Server, Entity Framework Core, Docker.
- **System Architecture:** Designed a scalable full-stack solution using Clean Architecture to ensure separation of concerns and long-term maintainability.
- **Backend Engineering:** Developed high-performance RESTful APIs using ASP.NET Core to manage workshop operations and data flow efficiently.
- **DevOps & Quality Assurance:** Implemented Docker for containerization to solve deployment consistency issues, and applied xUnit testing to ensure code reliability.
- **Interactive Frontend:** Built a responsive and interactive user interface using Blazor WebAssembly (WASM) for a seamless user experience.

Volunteering

Peer Support & Tech Assistance (2023 – Present)

- Provided technical support and mentorship to classmates by assisting with programming assignments, debugging code, and explaining core computer science concepts and software development practices.
- Strengthened communication, collaboration, and problem-solving skills while fostering a supportive and knowledge-sharing learning environment.

Technical Skills

- **Programming Languages:** C#, SQL, LINQ.
- **Backend Technologies:** ASP.NET Core Web API (.NET 10), Entity Framework Core, MediatR (CQRS), SignalR, ASP.NET Core Identity, EF Core Interceptors.
- **Distributed Systems & Architecture:** Clean Architecture, Domain Events, Outbox Pattern, Idempotency, Redis (Hybrid Cache), Optimistic Concurrency.
- **Security & Authentication:** JWT (JSON Web Tokens), Refresh Token Rotation, Role-Based Access Control (RBAC), OTP Verification, Authentication & Authorization.
- **Databases:** PostgreSQL, SQL Server.
- **Frontend Technologies:** HTML5, CSS3, Bootstrap, Blazor WebAssembly (WASM).
- **DevOps & Monitoring:** Docker, CI/CD Principles, Health Checks, Structured Logging (Serilog), Rate Limiting.

- **Version Control:** Git, GitHub.
 - **Tools & Concepts:** RESTful APIs, Unit Testing (xUnit), SOLID Principles, Object-Oriented Programming (OOP), Data Structures & Algorithms.
-

Soft skills

- **Problem Solving:** Strong analytical skills honed through algorithmic challenges.
 - **Adaptability:** Quick learner of new technologies and frameworks.
 - **Teamwork:** Proven ability to collaborate in academic and peer-support environments.
 - **Communication:** Effective in explaining technical concepts to non-technical peers.
-

Languages

- **English** writing, listening and speaking
- **Arabic** Native
